What is No-H2O?

No-H2O is an innovative waterless car washing product that emulsifies dirt particles and then safely absorbs those particles into a microfiber cloth. The positive charge in the product combined with a negative charge in the microfibre cloth creates a highly effective solution to washing cars, motorbikes, RV's and even aircraft. The product is scratch free and does not use water compared to a traditional car-wash that wastes approximately 35 gallons (132litres) per wash.

No-H2O is used by some of the world's largest automotive businesses including Hertz, Europcar, Sixt, BMW and others and is the only product of its type that has been approved for use on commercial Boeing and Airbus aircraft.

Why is it unique? _____

It is a specially formulated treatment used to wash and polish cars without using a single drop of water.

No-H2O is changing consumer trends through a convenience product offering, and ultimately delivering a product which is good for the environment. No-H2O is an innovative company producing products and services in line with changing consumer trends, at the same time a bold brand that is the future of car washing.

The first years of No-H2O have been sometimes compared to that of other great innovative brands that delivered a new product to the global market which was not accepted initially, but over time and with changing consumer trends moving towards convenient performance based products, No-H2O has become popular in both the DIY car care sector and also the service sector.

Not only does No-H2O save the environment, on average 35 gallons (132litres) of water per wash, but we also prevent the environment from suffering the harmful effluent that a normal car wash would dissipate in to the drainage system. A unique feature of our product is that it lasts approximately twice as long as a car which has been washed with water. No-H2O repels rain water and dirt for a longer period of time compared to a traditional carwash.
